Created through a patented process, our 4D HA formulations are made up of HA in four molecular weights:

- **Large** molecular weight HA,
- **Medium** molecular weight HA,
- **Sodium Acetylated** Hyaluronate,
- **Small** molecular weight HA.

For more
information, visit
www.regen4d.com

Each weight is developed to penetrate skin at different depths – the larger the molecule, the better the protection at the superficial skin layer; the smaller the molecule, the deeper the absorption.

Sodium Acetylated Hyaluronate can help to promote high affinity and adsorption properties of HA for skin.

The Anti-Aging Collection is enriched with ANTI-WRINKLE COMPOUND PEPTIDES, SACCHAROMYCES LYSATE EXTRACT and CAFFEINE which were

designed for anti-aging and glowing based on hydrating and skin cells activation.

It also **prevents and corrects signs of aging, reduces the appearance of fine lines and wrinkles, combats loss of firmness and lack of plumpness, restores skin vitality and radiance.**
